an Interscience® Publication, published by **JOHN WILEY & SONS**

The *International Journal of Quantum Chemistry* (ISSN 0020-7608) is published semi-monthly with two extra issues in November by John Wiley & Sons, Inc., 605 Third Avenue, New York, New York 10158.

Copyright © 1993 John Wiley & Sons, Inc. All rights reserved. No part of this publication may be reproduced in any form or by any means, except as permitted under section 107 or 108 of the 1976 United States Copyright Act, without either the prior written permission of the publisher, or authorization through the Copyright Clearance Center, 27 Congress Street, Salem, MA 01970, (508) 744-3350, fax (508) 745-9379. Second-class postage paid at New York, NY, and at additional mailing offices.

The code and the copyright notice appearing at the bottom of the first page of an article in this journal indicate the copyright owner's consent that copies of the article may be made for personal or internal use, or for the personal or internal use of specific clients, on the condition that the copier pay for copying beyond that permitted by Sections 107 or 108 of the U.S. Copyright Law.

This consent does not extend to the other kinds of copying, such as copying for general distribution, for advertising or promotional purposes, for creating new collective work, or for resale. Such permission requests and other permission inquiries should be addressed to the Permissions Dept.

Subscription price (Volumes 45–48, 1993): $2,465.00 in the US, $2,725.00 in Canada and Mexico, $2,822.50 outside North America. All subscriptions outside US will be sent by air. Personal rate (available only if there is an institutional subscription): $125.00 in North America, $255.00 outside North America. Subscriptions at the personal rate are available only to individuals. Payment must be made in US dollars drawn on a US bank. Claims for undelivered copies will be accepted only after the following issue has been received. Please enclose a copy of the mailing label. Missing copies will be supplied when losses have been sustained in transit and where reserve stock permits. Please allow four weeks for processing a change of address. For subscription inquiries, please call (212) 850-6645.

Postmaster: Send address changes to International Journal of Quantum Chemistry, Susan Malawski, Director, Subscription Fulfillment and Distribution, Subscription Department, John Wiley & Sons, Inc., 605 Third Avenue, New York, New York 10158.

Advertising Sales: Inquiries concerning advertising should be forwarded to Roberta Frederick, Advertising Sales, John Wiley & Sons, Inc., 605 Third Ave., New York, NY 10158; (212) 850-8832. Advertising Sales, European Contact: Michael Levermore, Advertising Manager, John Wiley & Sons, Ltd., Baffins Lane, Chichester, Sussex PO 19 1UD, England.

Manuscripts should be submitted in triplicate and accompanied by an executed Copyright Transfer Form to the Editorial Office, *International Journal of Quantum Chemistry,* Quantum Chemistry Group, University of Uppsala, Box 518, S-75120, Uppsala, Sweden. Authors may also submit manuscripts to the Editorial Office, *International Journal of Quantum Chemistry,* Quantum Theory Project, Williamson Hall, University of Florida, Gainesville, Florida 32611. **Information for Contributors** appears in the first and last issue of each volume. **All other correspondence** should be addressed to the *International Journal of Quantum Chemistry,* Publisher, Interscience Division, Professional, Reference, and Trade Group, John Wiley & Sons, Inc., 605 Third Avenue, New York, New York 10158, U.S.A. The contents of this journal are indexed or abstracted in *Chemical Abstracts, Chemical Titles, Chemical Database, Current Contents/Physical, Chemical, and Earth Sciences, Research Alert (ISI), Science Citation Index (ISI),* and *SCISEARCH Database (ISI).*

This journal is printed on acid-free paper.

INTERNATIONAL JOURNAL OF QUANTUM CHEMISTRY, VOL. 48, 389–391 (1993)

Subject Index to Volumes 47 and 48

Please note that A refers to Volume 47 and B refers to Volume 48.

Ab initio, 231A, 343B, 437A
Ab initio calculations, 295B
Ab initio electronic structure methods, 309B
Ab initio MO methods, 307A
Ab initio potential energy function, 335A
Adiabatic potential energy curves, 355B
AMBER force field, 231A
Ammonia–borane pyrolysis, 89B
Anions, 233B
Atomic basis sets, 295B
Atomic orbitals (AOs), 191A

Bardeen–Cooper–Schrieffer (BSC) ground state, 201B
Basis functions, 367B
Basis set superposition error, 375B
Benzene ring, 319B
Binding force concept, 393A
Born–Oppenheimer (BO) approximation, 201B
Brillouin–Wigner perturbation theory, 103A

Car–Parrinello computational scheme, 111B
Cations, 233B
Chain-length-dependent screened potential, 267B
Charge density, 287B
Charge shifts, 295B
Class-sums, 243A
Closed-shell Hartree–Fock approximation, 111B
Closed-shell molecules, 191A
Cluster-series model, 449A
Conjugated molecules, 333B
Correlated level, 375B
Correlation effects, 333B
Correlation energy functionals, 135A
Correlation theory, 49A
Counterpoise method, 375B
Couple cluster (CC) expectation values, 3A
Coupled cluster Green's function (CCGF), 15B
Coupled-cluster (CC) theory, 59B, 161B
Crystals, 287B
CVFF force field, 231A

DNA dimer units, 59A
DV–Xα cluster calculations, 59A
Decay dynamics, 213A
Decomposition, 145A
Density-based weight functions, 135A
Dirac–Coulomb–Breit Hamiltonian, 425A
Dirichlet problem, 405A
Dispersion-energy coefficients, 129A
Distance between subspaces, 85A

EHMO approach, 49B
Eigenfunctions, 405A
Eigenvalues, 137B
Electric-field maps, 233B
Electron correlation, 1B
Electron repulsion integrals, 257B
Electronegativity perturbation theory, 249B
Electronic correlation energy, 103A
Electronic structures, 449A
Electronic transitions, 333B
Electronic-phase transition, 325A
Excitation energies, 155A, 267B
Excited states, 333B
Excitonic spectra, 119A
Expansion coefficients, 239B
Explicitly connected commutator expansion, 161B
Extended Brillouin's theorem, 155A

Fluorination, 319B
Four-component wave function, 425A
Fractionally charged sodium atoms, 219B
Friedel–Crafts process, 307A

Gaussian expansions, 225A
Gaussian-type orbitals (GTO), 85A
Generalized projection (shift) operators, 211B, 319A
Ghost basis, 375B
Graph theory, 137B
Ground state, 201B
Ground-state energy, 177A
Ground-state potential energy surface, 103A
Group V–VII hydrides, 73B

© 1993 John Wiley & Sons, Inc.

Hartree–Fock approximation, 119A
Hartree–Fock approximations, 151B
Hartree–Fock solution, 325A
Helium-like ions, 1B
Hellmann–Feynman theorem, 393A
Hermite polynomials, 239B
Hessian matrix, 211B
High-T_c superconductivity, 185B, 201B
High-T_c superconductors, 49B
Hilbert–Schmidt norm, 225B
Hund rule, 191A
Hydrogen transfer, 437A
Hyperpolarizabilities, 333B

Identical permutational symmetry, 319A
Infinite one-dimensional system, 325A
Internuclear distance, 3A
Intrinsic reaction coordinate (IRC), 307A
Irreducible representations (IR), 319A
Isomers, 249B

Laguerre polynomials, 239B
Legendre polynomials, 239B
Linear combinations of Gaussian-type orbital–model core potential–local spin density (LCGTO–MCP–LSD) computations, 277B
Linear perturbation operator, 469A
Local Correlation method, 49A
Local defects, 449A
Local ionization energies, 73B
Long-range intermolecular potentials, 261A

MNDO molecular orbital method, 233B
Many-body perturbation theory (MBPT) expansion, 161B
Many-center two-electron integrals, 225A
MAPLE, 261A
Metastable state, 213A
Mills–Nixon effect, 319B
Molecular calculations, 367B
Molecular orbital theory, 151B
Molecular surface electrostatic potentials, 73B
Møller–Plesset perturbation theory, 469A
Møller–Plesset theory, 49A
Mulliken charges, 233B
Mulliken electronegativity differences, 295B
Multipole moment analysis (MMA), 295B

N-electron problem, 185B
NH^{2+} dications, 355B
Natural decay process, 213A
Newtonian dynamics, 111B
Ni(100) surface, 277B
Nonlinear Schrödinger equation, 469A
Nonlinear Hamiltonian, 151B
Nonlinear problems, 151B
Nonlinear Roothaan's equations, 151B
Normal coupled cluster method (NCCM), 3A
Nuclear spin–spin coupling tensor, 425A
Numerical integration scheme, 135A

Observable, 161B
Off-diagonal disorder, 137B
One-electron densities, 1B
One-electron theory, 185B
Open-chain polymers, 89B
Orthogonal polynomials, 239B
Orthonormalization procedures, 225B
Outer-valence GF (OVGF), 15B
Oxygen adsorption, 277B
Oxygen atom, 277B

Pariser–Parr–Pople (PPP) parametrization scheme, 267B
Pauli Blockade (PB) method, 145A
Permutation group, 185A
Perturbation theory, 249B
Perturbation–variational theories, 103A
PH^{2+} dications, 355B
Phosphorous compounds, 343B
Polarizabilities, 129A, 145A, 59A
Polarization propagator approach, 425A
Polyatomic molecules, 393A
Polyenes, 267B
Polymer chain, 449A
Population transfer, 213A
Positive background, 177A
Potential energy profiles (PEP), 307A
Potential energy surface, 231A
Proton affinities (PAs), 343B
Proton collisions, 375A

Quarks, 219B

Random-phase approximation, 119A
Rayleigh–Schrödinger perturbation theory, 261A, 469A
Recurrence relations, 243A, 257B
Reduced class-coefficients, 243A
Representation matrices, 185A
Resemblance theorems, 225B
Rotational energy transfers, 375A
Rumer techniques, 185A

SCF interaction energy, 145A
Schrödinger operators, 405A
Second hyperpolarizabilities, 129A
Second-order Jahn–Teller instability, 309B
Second–order Jahn–Teller (SOJT) instability, 211B
Semiempirical quantum mechanical method, 231A
Single-cycle class-sums, 127B
Slater orbitals, 225A
Slater-type orbitals (STO), 85A
Sodium atoms, 219B
Solids, 287B
SOS formalism, 333B
Space-restricted basis functions, 367B
Spherical Gaussian functions, 257B
Spin correlation effects, 191A
Spin-paired functions, 185A
Stable electronic eigenvalues, 137B
Stewart's least-squares method, 85A
Symmetric Eckart function, 437A
Symmetric group, 127B, 243A
Symmetry-breaking mode, 211B

Tamm–Dancoff approximation, 119A
Tautomers, 49A
Three-body induction effects, 261A
Tight-binding method, 49B
Time-varying electric field, 213A
Transition densities, 155A
Transition states, 211B, 319A
Transition-state theory, 89B
Triatomic linear molecules, 249B
Tunneling, 437A

Valence electronic states, 355B
Valence-universal coupled-cluster (VU–CC) method, 59B
Van der Waals coefficients, 261A
van der Waals complex, 309B
Vertical ionization potentials (IPs), 15B
Vibrational–rotational potential energy surface, 335A

Walden inversion reaction, 307A
Weak dative complex stability, 89B
Wigner lattice, 177A

Young diagram, 127B
Yukawa-type charge distribution, 177A
